

Welcome to our study!

The purpose of this study is to investigate user experience in an online voting system intended for general elections. Before proceeding, we ask for your consent.

Description of research

Before entering the voting system, you will be asked to download an instruction paper for the voting system and instructed which task to complete. This will be followed by a short questionnaire, which you will get redirected to from the last page of the voting system. Once you have completed the study tasks in the voting system, you will be redirected to Prolific. The total duration of the study is approximately 5 minutes. We highly recommend using a desktop device for the study.

Withdrawal

You can withdraw your consent about being part of the study at any time before the completion of the study, meaning before you submit the survey. In this case your collected data will be deleted by the researchers. For more information on how to withdraw from a study before completion in Prolific, see this link: <https://participant-help.prolific.com/en/articles/445041-how-to-return-a-submission-on-prolific> After completing the study, you may still request to have your data deleted until 14 days after submitting the survey by contacting the researchers and providing your Prolific ID, which allows us to locate and remove your data. After this deadline, it will no longer be possible to delete your data.

Ethical considerations and your wellbeing

The voting system you are testing is designed to help prevent coercion in online voting. During the study, you may encounter situations that explore how the system handles different voting scenarios. If you experience any discomfort or distress at any point, you can leave the study without any penalty.

Compensation

Each participant will receive 0.75 £ at the conclusion of the study through Prolific.

How we handle and delete the data

If a participant discloses any personal information about themselves or other people in the voting system, the researchers will remove this from the dataset and replace it with a placeholder.

What data we collect

We collect the data that the participants are asked to provide within the voting system. Please note that all candidates on the digital voting paper are fictional and the participants are asked to vote for a specific candidate before they enter the voting system. Therefore, we do not collect any sensitive personal data on political interests.

How we use the data

We collect and process your data for research purposes under the public interest legal basis. These data will be used to derive statistical measures of users' attitudes towards internet voting systems, as well as qualitative insights from open-ended responses.. The data might be referenced or quoted, but not printed in full unless it is completely anonymized, in the published research reports and other academic publications.

Who has access to the data?

The researchers have access to the original data until it has been edited to replace given personal information with placeholders as to anonymize it.

Third parties

We use the following third party services in connection with this study:

- Vercel: We use Vercel to host the voting system. Vercel might collect your IP address and other personal data, however, we will not have access to this data and Vercel is not sharing any IP addresses or other personal data. Please refer to Vercel's privacy policy for more information: <https://vercel.com/privacy>
- Back4App: We use Back4App to store data connected to your testing of the voting system. This data is not considered personal (unless you choose to disclose identifying information about yourself when using the voting system). Back4app might collect personal data which we will

not have access to. Please refer to Back4App's privacy policy for more information: <https://www.back4app.com/privacy.pdf>

- SurveyXact: We use SurveyXact to carry out the survey. Personal data (gender, age, nationality, level of education) will be collected through the questions and stored on the SurveyXact platform. Please refer to SurveyXact's privacy policy for more information: <https://www.surveymxact.com/product/data-security/>

Questions

For any questions concerning our processing of your personal data, please contact one of the students involved in the project (see contact details above).

I consent to serve as a subject in the research investigation described above.
I confirm that I am fluent in English.
